|  |  |  | No shutter channel requirement. |  |  |  |  |  |  |
|  |  |  | TBD | 81 | 255 | 32\% | 100\% | 51h | FFh |

NOTES
Note 1 Dim Low is only used in Standard Protocol.
Note 2 The pan and tilt coarse channels set the center position of the position macro.
The Mspeed channel is used to control the speed of the macros.
0-4 Default speed of 2.5 seconds.
5-255 Minimum speed of $1 / 2$ second with a maximum of 25 seconds.
With the Mspeed set at the default value of DMX 0-4 all internal effects complete moves at appr. 2.5 seconds. This provides a pleasing look for customers not wanting the additional variation given by using the Mspeed channel. With Mspeed set between DMX 5-255 all internal effects complete moves at selected Mspeed time (up to 25 secs).
Those fixture types that support On Board Programming also support the Internal Effects as part of the On Board programming features. The Internal Effects will operate as an additional programming parameter labeled MACR.
Note 3 Control channel should return to Safe after issuing of the desired command.
