## INTRODUCTION

Thank you for selecting the Martin CX-4. The CX-4 is an automated profile spotlight designed for a 150 watt discharge source. It provides colors, gobos, 5 beam angles, a frost effect, continuous dimming, adjustable focus, and multiple control options.

## CX-4 SAFETY INFORMATION

## Warning!

This product is for professional use only. It is not for household use.

This product presents risks of lethal or severe injury due to fire and heat, electric shock, and falls. Read this manual before powering or installing the fixture, follow the safety precautions listed below and observe all warnings in this manual and printed on the fixture. If you have questions about how to operate the fixture safely, please contact your Martin dealer or call the Martin 24-hour service hotline at +45 70200201.

## To protect yourself and others from electric shock

- Disconnect the fixture from AC power before removing or installing the lamp, fuses, or any part, and when not in use.
- Always ground (earth) the fixture electrically.
- Use only a source of AC power that complies with local building and electrical codes and has both overload and ground-fault protection.
- Do not expose the fixture to rain or moisture.
- Refer any service operation not described in this manual to a qualified technician.
- Never operate the fixture with missing or damaged lenses and/or covers.

## To protect yourself and others from burns and fire

- Never attempt to bypass the thermostatic switch or fuses. Always replace defective fuses with ones of the specified type and rating.
- Keep all combustible materials (for example fabric, wood, paper) at least 0.1 meters (4 inches) away from the fixture. Keep flammable materials well away from the fixture.
- Replace the lamp if it becomes defective or worn out. When replacing the lamp, allow the fixture to cool for at least 5 minutes before opening the fixture or removing the lamp. Protect your hands and eyes with gloves and safety glasses.
- Do not illuminate surfaces within 0.3 meters ( 12 inches) of the fixture.
- Provide a minimum clearance of 0.1 meters ( 4 inches) around fans and air vents.
- Never place filters or other materials over the lens.
- The exterior of the fixture can reach temperatures up to $65^{\circ} \mathrm{C}\left(149^{\circ} \mathrm{F}\right)$. Allow the fixture to cool for at least 5 minutes before handling.
- Do not modify the fixture or install other than genuine Martin parts.
- Do not operate the fixture if the ambient temperature ( Ta ) exceeds $40^{\circ} \mathrm{C}\left(104^{\circ} \mathrm{F}\right)$.

## To protect yourself and others from injury due to falls

- When suspending the fixture above ground level, verify that the structure can hold at least 10 times the weight of all installed devices.
- Verify that all external covers and rigging hardware are securely fastened and use an approved means of secondary attachment such as a safety cable.
- Block access below the work area whenever installing or removing the fixture.

## UNPACKING

The packing material is carefully designed to protect the fixture during shipment - always use it to transport the fixture.

The CX-4 comes with:

- Philips CDM-SA/T 150W discharge lamp
- 3-meter, 3-wire IEC power cable
- User manual

## LAMP

The CX-4 uses the Philips CDM-SA/T (short-arc, tubular) 150W discharge lamp. If desired, the GE Arcstream 150 may be substituted.

| Lamp | Efficiency | Color Temp. | Average Life |
| :--- | :--- | :--- | :--- |
| Philips CDM-SA/T 150W | $85 \mathrm{Lm} / \mathrm{W}$ | 4000 K | 6000 h |
| GE Arcstream 150 | $77 \mathrm{Lm} / \mathrm{W}$ | 4000 K | 6000 h |

The CX-4 can be modified with a different lamp socket that allows use of the following lamps:

- Martin HTI 150 W, 2000 h
- OSRAM HTI $150 \mathrm{~W}, 750 \mathrm{~h}$
- GE CSS 150 W, 1000 h

Please contact your Martin dealer for details.
Warning! Installing a lamp other than specified may be hazardous.

## To install a lamp

Warning! Disconnect the fixture from AC power and allow the fixture to cool before opening the fixture.

1 Remove 2 screws from the lamp-socket assembly with a Pozidriv \#2 screwdriver. Remove the lamp assembly.

2 Remove the old lamp from the socket.
3 Holding the new lamp by its base (do not touch the glass), insert the lamp pins squarely into the socket.

4 If your fingers touched the glass bulb, clean it with a clean, lint-free cloth wetted with alcohol.

5 Insert the lamp assembly with the black metal shield up, between the lamp and the fan. Replace the screws.

## To align the lamp

Realignment when changing the lamp may improve performance.
1 Strike the lamp and project the light on a flat surface.
2 Using a 3 mm Allen wrench, center the hot-spot horizontally with the top-left adjustment screw. Center the hot-spot vertically with the bottom-right adjustment screw.

3 if there is significant hot-spot, flatten the field by turning all 3 adjustment screws clockwise $1 / 4$-turn at a time until the light is evenly distributed and there is no further improvement.

4 If the light is brighter around the edge than it is in the center, or if light output is low, turn the screws counterclockwise $1 / 4$-turn at a time until the light is evenly distributed and there is not further improvement.

## AC POWER CONNECTION

The CX-4 power supply must be wired to the voltage and frequency setting that most closely matches the local AC supply. The factory setting is shown on the serial number label.

Warning! For protection from fire and electric shock, the fixture must be grounded (earthed). The power supply shall have overload and ground-fault protection.

Warning! Verify that the feed cables are undamaged and rated for the current requirements of all connected devices before use.

Important! Check the power supply setting before applying power.
Important! Do not connect the fixture to a dimmer system.

## To install a plug on the mains lead

The mains lead must be fitted with a grounding-type cord cap that fits your power distribution system. Consult a qualified electrician if you have any doubts about proper installation.

- Following the cord cap manufacturer's instructions, connect the yellow and green wire to ground (earth), the brown wire to live, and the blue wire to neutral. The table below shows some pin identification schemes.

| Wire | Pin | Marking | Screw color |
| :---: | :---: | :---: | :---: |
| brown | live | "L" | yellow or brass |
| blue | neutral | "N" | silver |
| yellow/green | ground | $\stackrel{\perp}{=}$ | green |

Table 1: Cord cap wiring

## To rewire the power supply

1 Disconnect the fixture from AC power. Remove the top cover bolts with a 4 mm Allen wrench and lift off the cover.

2 On the transformer, which is located behind the color wheel, move the brown and white wires to the transformer taps shown below for your mains voltage. Do not move the blue wire from terminal 9 or the black wire from terminal 15.

| Mains voltage | Setting | Brown | White | Blue | Black |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $95-109 \mathrm{~V}$ | 100 V | 12 | 10 |  |  |
| $110-130 \mathrm{~V}$ | 120 V | 12 | 9 |  |  |
| $200-219 \mathrm{~V}$ | 210 V | 15 | 10 | 9 | 15 |
| $219-239 \mathrm{~V}$ | 230 V | 15 | 9 |  |  |
| $240-260 \mathrm{~V}$ | 250 V | 16 | 9 |  |  |

Table 2: Transformer settings

3 The frequency setting ( 50 or 60 Hz ) is selected by moving the black wire on the ballast, which is located behind the effect wheel. To set for 50 Hz , move the black wire to the "230-50" terminal. To set for 60 Hz , move the black wire to the "230-60" terminal. See below. The wire is released and locked by inserting a small screwdriver in the square hole next to the terminal and prying back the spring.

4 Tug lightly on the black wire to make sure that it is connected securely.
5 Replace the top cover.

50 Hz

60 Hz

## INSTALLATION

The CX-4 can be fastened directly to a suitable surface or hung with a rigging clamp bolted to its adjustable mounting bracket.

Do not lay the fixture flat on its mounting bracket arms or position it so that there is less than 10 cm (4 in.) clearance around the fan and air vents.

For maximum lamp life, do not place the fixture directly on or beside a speaker cabinet.

## To rig the CX-4

## Warning! Always use a secure means of secondary attachment. Block

 access below the work area before proceeding.1 If clamping the fixture, verify that the clamp (not included) is undamaged and can bear at least 10 times the fixture's weight. Bolt the clamp securely to the bracket with a grade 8.8 (minimum) M12 bolt and lock nut, or as recommended by the clamp manufacturer, through the 13 mm hole in the center of the mounting bracket.

2 If permanently installing the fixture, verify that the hardware (not included) and mounting surface can bear at least 10 times the fixture's weight. The four 6.2 mm holes and/or the 13 mm hole in the mounting bracket may be used.

3 Verify that the structure can support at least 10 times the weight of all installed fixtures, clamps, cables, auxiliary equipment, etc.

4 Working from a stable platform, clamp or fasten the fixture to the structure.
5 Install a safety cable that can hold at least 10 times the weight of the fixture through/over the support and through a hole in one of the aluminum arms.

6 Loosen the swivel locks and tilt the fixture to the desired angle. Turn the swivel locks clockwise to tighten. If a swivel lock does not tighten fully, pull the handle out, turn it counterclockwise, and retighten. Repeat as necessary.

7 Verify that the fixture is located at least 0.3 meters ( 12 in .) away from the surface to be illuminated and at least 0.1 meters ( 4 in .) from any combustible materials. Verify that the clearance around the fan and air vents is at least 0.1 meters (4 in.). Verify that there are no flammable materials nearby.

## Data connection

A reliable data connection begins with the right cable. For best results, use cable specifically designed for RS-485 applications, available from your Martin dealer.

## CONNECTIONS

The data sockets are wired with pin 1 to ground, pin 2 to signal - (cold), and pin 3 to signal + (hot) for compatibility with DMX devices. One or more adaptor cables as shown below may be required for connection to the controller or other lights.

| 5-pin to 3-pin <br> Adaptor |
| :---: | :---: |
| Male Female |
| 1 - 1 |
| $2-2$ |
| $3-3$ |
| 4 |
| 5 |
| P/N 11820005 |

| 3-pin to 5-pin <br> Adaptor |
| :---: | :---: |
| Male Female |
| $1-1$ |
| $2-3$ |
| $3-4$ |
| 5 |
| P/N 11820004 |

| 3-pin to 3-pin Phase-Reversing Adaptor | Male Termination Plug |
| :---: | :---: |
| $\begin{array}{cc} \text { Male } & \text { Female } \\ 1 — \\ 2 & 1 \\ 3> & 2 \end{array}$ | $\begin{aligned} & \text { Male XLR } \\ & 1 \\ & 2 \\ & 3 \end{aligned}$ |
| P/N 11820006 | P/N 91613017 |

## To connect the data link

1 Connect a cable to the controller's data output. If the output socket has a 5 pins, use a 5-pin male to 3-pin female adaptor. Lead the cable to the first fixture and plug it into the data input.

2 Connect the output of the fixture closest to the controller to the input of the next fixture. If connecting to a fixture with reversed-polarity (pin 3 cold), insert a phase-reversing cable between the two fixtures. Continue connecting fixtures output to input. Up to $\mathbf{3 2}$ devices may be connected on a serial link.

3 Terminate the link by inserting a male termination plug ( $\mathrm{P} / \mathrm{N} 91613017$ ) into the data output of the last fixture. A termination plug is simply an XLR connector with a 120 ohm, 0.25 W resistor soldered across pins 2 and 3.

## Stand-alone operation

The CX-4 may be operated in a random-action stand-alone mode without a controller. It may be operated as a single unit or in synchronization with other CX-4s in "master/slave" configuration. Several options are available to modify operation. These are selected with the DIP-switch and are described on page 14.

## Important! The CX-4 transmits a signal on the data link when DIP-switch pins 2 and 10 are set to ON. To avoid possible damage, connect no more than 1 transmitting device to the data link.

## SINGLE UNIT OPERATION

The fixture enters stand-alone mode with music trigger when power is applied and no control signal is received for 5 seconds. To operate, simply apply power and disconnect the data link.

Options for trigger type and speed may be selected as described below under "Stand-alone settings". To select stand-alone mode with auto trigger, set DIPswitch pins $1,3,5,6,7,8,9$, and 11 to off; set pins 2 and 10 to on. Pins 4 and 12 may be on or off.

## MASTER / SLAVE OPERATION

Multiple CX-4s can be connected together for synchronized "master/slave" operation in which the slaves mimic the behavior of the master, which may be any one of the connected fixtures.

## To connect units for master / slave operation

1 Connect the output of one CX-4 to the input of the next CX-4.
2 Connect additional CX-4s output to input. Up to 32 may be connected.
3 Terminate the link on both ends by inserting a female termination plug ( $\mathrm{P} / \mathrm{N}$ 91613018) into the data input of the first fixture and a male termination plug into the data output of the last fixture. The female terminator may not be required if the first fixture is the master.

To set the master
Important! Set only 1 fixture as master (DIP-switch pin 2 and 10 ON).
1 Set DIP-switch pins 2 and 10 to ON.
2 Set DIP-switch pins 3, 5, 6, 7, 8, 9, and 11 to OFF.

3 Select trigger and speed options with DIP-switch pins 1 and 4.

## To set a slave

1 Set DIP-switch 10 to ON.
2 Set pins 1, 2, 3, 4, 5 and 11 to OFF.

3 Select options with DIP-switch pins 6, 7, 8, and 9.

## STAND-ALONE SETTINGS

DIP-switch pins 1-9 enable stand-alone options only when pin 10 is ON. When pin 10 is off, the DIP-switch selects a DMX address. Pin 11 selects 1-channel DMX mode and must be OFF for stand-alone operation.

Pin 12 selects the DMX protocol for the effect wheel and has no effect in standalone mode.

The DIP-switch 10 setting takes effect only after the fixture has been turned off and on.

| Fixture | Option | Setting (0 = OFF, $1=0 \mathrm{C}$ ) |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
| single or master | auto trigger | 0 | 1 | 0 |  |  | 0 |  |  |  | 1 | 0 |
|  | music trigger | 1 | 1 | 0 |  |  | 0 |  |  |  |  |  |
|  | slow change |  | 1 | 0 | 1 |  | 0 |  |  |  |  |  |
| slave | random color | 0 |  |  |  |  | 1 |  |  |  |  |  |
|  | random effect |  |  | 0 |  |  |  | 1 |  |  |  |  |
|  | inverted color |  |  | 0 |  |  |  |  | 1 |  |  |  |
|  | inverted effect |  |  | 0 |  |  |  |  |  | 1 |  |  |

## MC-1 OPERATION

The CX-4 is fully compatible with the Martin MC-1 Controller. See the MC-1 user manual for additional information.

## MC-1 MODE SETTINGS

DIP-switch pin 10 must be set to OFF to enable MC-1 mode operation. Changes to the setting take effect after the fixture has been turned off and on.

DIP-switch pins 6, 7, 8, and 9 select control options. The remaining pins have no effect in MC-1 mode.

| Option | Setting ( $0=0$ FF, $1=0 N$ ) |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
| random color |  |  |  |  |  | 1 |  |  |  | 0 |  |
| random effect |  |  |  |  |  |  | 1 |  |  | 0 |  |
| inverted color |  |  |  |  |  |  |  | 1 |  | 0 |  |
| inverted effect |  |  |  |  |  |  |  |  | 1 | 0 |  |

## DMX operation

## DMX MODES

The CX-4 has 2 DMX modes to choose from: a 1-channel mode that provides control of the built-in stand-alone features, and a 6 -channel mode that provides full control of all effects.

The 6-channel mode provides 2 options for controlling the effect wheel that are selected with DIP-switch 12.

## To select DMX mode

1 Disconnect the fixture from power. Set DIP-switch pin 10 to OFF.
2 To select 1-channel DMX mode, set DIP-switch pin 11 to ON. To select 6channel DMX mode, set DIP-switch pin 11 to OFF

3 Select the effect wheel control option. Set DIP-switch pin 12 to OFF if you want the effect wheel to be open at DMX values $0-9$. Set it to ON if you want the gobo wheel to blackout the light at DMX 0-9.

## DMX ADDRESS

DIP-switch pins 1-9 are used to set the control address. The address, also known as the start channel, is the first channel used to receive instructions from the controller.

For independent control, each fixture must be assigned its own address and nonoverlapping control channels. Two CX-4s may share the same address only if they are to respond identically: they will receive the same instructions and individual control will not be possible.

## To set the DMX address

1 Select an address for the fixture on your controller. Look up the DIP-switch setting for the address in the table below.

2 Disconnect the fixture from power.
3 Set pins 1 through 9 to the ON (1) or OFF (0) position as listed in the table.

Find the address in the table. Read the settings for pins 1-5 to the left and read the settings for pins 6-9 above the address. "0" means OFF and " 1 " means ON.
Pin 10 is always OFF for DMX operation.

| DIP-Switch Setting |  |  |  |  | \#9 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & 0=O F F \\ & 1=0 N \end{aligned}$ |  |  |  |  | \#8 | 0 | 0 | - | 0 | 1 | 1 | 1 | 1 | 0 | 0 | 0 | 0 | 1 | 1 | 1 | 1 |
|  |  |  |  |  | \#7 | 0 | 0 | 1 | 1 | 0 | 0 | 1 | 1 | 0 | 0 | 1 | 1 | 0 | 0 | 1 | 1 |
|  |  |  |  |  | \#6 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 |
| \#1 | \#2 | \#3 | \#4 | \#5 |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 0 | 0 | 0 | 0 | 0 |  |  | 32 | 64 | 96 | 128 | 160 | 192 | 224 | 256 | 288 | 320 | 352 | 384 | 416 | 48 | 480 |
| 1 | 0 | 0 | 0 | 0 |  | 1 | 33 | 65 | 97 | 129 | 161 | 193 | 225 | 257 | 289 | 321 | 353 | 385 | 417 | 449 | 481 |
| 0 | 1 | 0 | 0 | 0 |  | 2 | 34 | 66 | 98 | 130 | 162 | 194 | 226 | 258 | 290 | 322 | 354 | 386 | 418 | 450 | 482 |
| 1 | 1 | 0 | 0 | 0 |  | 3 | 35 | 67 | 99 | 131 | 163 | 195 | 227 | 259 | 291 | 323 | 355 | 387 | 419 | 451 | 483 |
| 0 | 0 | 1 | 0 | 0 |  | 4 | 36 | 68 | 100 | 132 | 164 | 196 | 228 | 260 | 292 | 324 | 356 | 388 | 420 | 452 | 484 |
| 1 | 0 | 1 | 0 | 0 |  | 5 | 37 | 69 | 101 | 133 | 165 | 197 | 229 | 261 | 293 | 325 | 357 | 389 | 421 | 453 | 485 |
| 0 | 1 | 1 | 0 | 0 |  | 6 | 38 | 70 | 102 | 134 | 166 | 198 | 230 | 262 | 294 | 326 | 358 | 390 | 422 | 454 | 486 |
| 1 | 1 | 1 | 0 | 0 |  | 7 | 39 | 71 | 103 | 135 | 167 | 199 | 231 | 263 | 295 | 327 | 359 | 391 | 423 | 455 | 487 |
| 0 | 0 | 0 | 1 | 0 |  | 8 | 40 | 72 | 104 | 136 | 168 | 200 | 232 | 264 | 296 | 328 | 360 | 392 | 424 | 456 | 488 |
| 1 | 0 | 0 | 1 | 0 |  | 9 | 41 | 73 | 105 | 137 | 169 | 201 | 233 | 265 | 297 | 329 | 361 | 393 | 425 | 457 | 489 |
| 0 | 1 | 0 | 1 | 0 |  | 10 | 42 | 74 | 106 | 138 | 170 | 202 | 234 | 266 | 298 | 330 | 362 | 394 | 426 | 458 | 490 |
| 1 | 1 | 0 | 1 | 0 |  | 11 | 43 | 75 | 107 | 139 | 171 | 203 | 235 | 267 | 299 | 331 | 363 | 395 | 427 | 459 | 491 |
| 0 | 0 | 1 | 1 | 0 |  | 12 | 44 | 76 | 108 | 140 | 172 | 204 | 236 | 268 | 300 | 332 | 364 | 396 | 428 | 460 | 492 |
| 1 | 0 | 1 | 1 | 0 |  | 13 | 45 | 77 | 109 | 141 | 173 | 205 | 237 | 269 | 301 | 333 | 365 | 397 | 429 | 461 | 493 |
| 0 | 1 | 1 | 1 | 0 |  | 14 | 46 | 78 | 110 | 142 | 174 | 206 | 238 | 270 | 302 | 334 | 366 | 398 | 430 | 462 | 494 |

## 1-CHANNEL DMX OPERATION

The functions shown in the following table are available in 1-channel mode. When a "stand-alone" function is selected, the fixture steps through a routine using a built-in microphone to trigger the action to the beat of the music. Note that multiple fixtures cannot be synchronized in this mode.

| DMX value | Percent | Function |
| :---: | :---: | :--- |
| $0-10$ | $0-4$ | Blackout (dimmer closed) |
| $11-20$ | $5-7$ | Open |
| $21-80$ | $8-31$ | Strobe |
| $81-115$ | $32-45$ | Stand-alone with slow music trigger |
| $116-140$ | $46-55$ | Stand-alone with medium music trigger |
| $141-175$ | $56-68$ | Stand-alone with fast music trigger |
| $176-210$ | $69-82$ | Stand-alone with random music trigger |
| $211-255$ | $83-100$ | Manual trigger area, crossover at 240 (94\%) |

## FULL DMX OPERATION

See also the DMX protocol on page 22.
Channel 1 controls lamp power and strobe rate. It also allows you to execute a program with random color and gobo change using automatic or music trigger.

All effect wheels are reset to their home position when the fixture is powered up; they can also be reset from the controller by sending a reset command on channel 1.

Channel 2 controls the dimmer.
Channel 3 controls the color wheel. When set to 100 percent, the wheel moves to random positions using the trigger selected on channel 1.

Channel 4 controls the effect wheel. The wheel's position depends on the setting of DIP-switch pin 12 as well as the DMX value. When pin 12 is off, the wheel goes from open at 0 percent to closed at 90 percent. When pin 12 is on, the wheel goes from closed at 0 percent, open at 3 percent, to the small iris at 90 percent. When set to 100 percent, the effect wheel moves to random positions using the trigger selected on channel 1. See the DMX protocol for complete details.

Channel 5 controls the dimmer speed, allowing you to program fades on controllers without cross-faders. If your controller has cross-faders, and you use them, then set channel 5 to the "tracking" speed ( 0 percent).

Channel 6 controls the speed of the color and effect wheels. If your controller has cross-faders, and you use them, then set channel 6 to fast ( 0 percent).

## BASIC SERVICE

The CX-4 requires simple routine maintenance. The maintenance schedule depends heavily on the operating environment; please consult a Martin service technician for recommendations.

Any service procedure not described here should be referred to a qualified technician.

## Important! Excessive dust, grease, and smoke fluid buildup degrades performance and causes overheating and damage to the fixture that is not covered by the warranty. <br> Warning! Disconnect the fixture from AC power before removing any cover.

## CLEANING

## To clean optical components

Use care when cleaning optical components. The surface of the color filters is fragile and small scratches may be visible.

1 Disconnect the fixture from AC power and allow the components to cool completely.

2 Remove the top cover bolts with a 4 mm Allen wrench and lift off the cover.
3 Blow or vacuum away loose dust. Remove residues from lenses and filters with a soft cloth or cotton swabs wetted with isopropyl alcohol. Regular glass cleaner may also be used, but no residues may remain.

4 Rinse with distilled water. Mixing the water with a small amount of wetting agent such as Kodak Photoflo will help prevent streaking and spotting.

5 Dry with a clean, soft and lint-free cloth or blow dry with compressed air.
6 Replace the top cover.

To clean the fan and air vents
To maintain adequate cooling, dust must be cleaned from the fan and air vents periodically.

1 Remove the data and power cables and stand the fixture on end.
2 Remove dust and dirt from the fan blades and vent grills using a soft brush, cotton swab, vacuum, or compressed air.

## REPLACING FUSES

The CX-4 has 2 fuses. The main fuse holder is built in to the mains input socket. The secondary fuse is located on the printed circuit board.

Warning! Never replace fuses with ones of a different rating!

## To replace the main fuse

1 Unplug the mains cable from the input socket. Pry open the fuse holder and remove the fuse.

2 Replace the fuse with one of the same type. The fuse rating is listed on serial number label.

## To replace the secondary fuse

1 Disconnect the fixture from AC power. Remove the top cover bolts with a 4 mm Allen wrench and lift off the cover.

2 The fuse is located right behind the data input connector. Pry out the defective fuse and replace it with one of the same rating.

3 Replace the cover before applying power.

## TROUBLESHOOTING

| Problem | Probable cause(s) | Remedy |
| :---: | :---: | :---: |
| One or more of the fixtures is completely dead. | No power to fixture. | Check that power is switched on and cables are plugged in. |
|  | Primary fuse blown. | Replace fuse. |
|  | Secondary fuse blown. | Replace fuse. |
| Fixtures reset correctly but all respond erratically or not at all to the controller. | The controller is not connected. | Connect controller. |
|  | XLR pin-out of the controller does not match pin-out of the first fixture on the link (i.e. signal is reversed). | Install a phase-reversing cable between the controller and the first fixture on the link. |
| Fixtures reset correctly but some respond erratically or not at all to the controller. | Bad data link connection | Inspect connections and cables. Correct poor connections. Repair or replace damaged cables. |
|  | Data link not terminated with $120 \Omega$ termination plug. | Insert termination plug in output jack of the last fixture on the link. |
|  | Incorrect addressing of the fixtures. | Check DIP-switch settings. |
|  | One of the fixtures is transmitting as a master or is defective. | Bypass one fixture at a time until normal operation is regained: unplug both connectors and connect them directly together. Have the defective fixture serviced by a qualified technician. |
| An effect fails to reset correctly. | The effect requires mechanical adjustment. | Contact Martin technician for service. |
| No light. | Lamp missing or blown | Disconnect fixture and replace lamp. |
| Lamp cuts out intermittently or burns out too quickly. | Fixture is too hot. | Allow fixture to cool. |
|  | The transformer setting does not match local AC voltage. | Check AC setting. |

## Specifications

PHYSICAL
Size (L x W x H): ..... $296 \times 269 \times 270 \mathrm{~mm}(11.7 \times 10.6 \times 10.6 \mathrm{in})$
Weight: ..... $8.5 \mathrm{~kg}(18.7 \mathrm{lbs})$
THERMAL
Maximum ambient temperature (Ta): ..... $40^{\circ} \mathrm{C}\left(104^{\circ} \mathrm{F}\right)$
Maximum surface temperature: ..... $65^{\circ} \mathrm{C}\left(149^{\circ} \mathrm{F}\right)$
CONTROL AND PROGRAMMING
DMX-512 (1990) control:1 and 6 channel control modes
Stand-alone control: automatic \& music trigger, master/slave configurableData pinout: . . . . . . . . . . . . . . . . . . 3-pin XLR - pin 1 shield, pin 2 cold (-), pin 3 hot (+)
AC SUPPLY
AC input: 3-pin IEC male socket
Wiring options: $100 / 120 / 210 / 230 / 250 \mathrm{~V}, 50 / 60 \mathrm{~Hz}$
MAXIMUM POWER AND CURRENT
@ $100 \mathrm{~V}, 50 \mathrm{~Hz}$ ..... $210 \mathrm{~W}, 2.9 \mathrm{~A}$
@ $120 \mathrm{~V}, 60 \mathrm{~Hz}$ ..... 205 W, 2.1 A
@ $210 \mathrm{~V}, 60 \mathrm{~Hz}$ ..... 160 W, 1.1 A
@ $230 \mathrm{~V}, 50 \mathrm{~Hz}$ ..... 205 W, 1.1 A
@ $250 \mathrm{~V}, 50 \mathrm{~Hz}$ ..... 200 W, 1.1 A
FUSES
Primary fuse: T 3.15 A, high $\mathrm{I}^{2} \mathrm{t}, 250 \mathrm{~V}$
Secondary fuse: ..... T $2.0 \mathrm{~A}, 250 \mathrm{~V}$
CONSTRUCTION
Housing: UV-resistant fiber-reinforced compositeFinish, black:integral color
Finish, titanium: polyurethane coating
INSTALLATION
Minimum distance to combustible materials: ..... $0.1 \mathrm{~m}(4 \mathrm{in})$
Minimum distance to illuminated surfaces: ..... $0.3 \mathrm{~m}(12 \mathrm{in})$
Minimum clearance around fan and air vents: 0.1 m (4 in)
